CENTS-ABILITIES

(Grade 5 and up)

- Farnette, Forte, and Barris

An economic awareness activity book. The high interest (low vocabulary) format has been maintained to promote use of basic communication skills in the most positive and meaningful sense. Self-evaluative questionnaires, quizzes, puzzles, codes and functional reading and writing activities may be electively used to extend cognitive learning and reinforce affective development. Simple, easy-to-follow directions are self-explanatory, and are designed to encourage pupil independence.

Table of Contents: Making Money; Spending Money; Saving Money. Cost is $7.25; over 100 pages.

GOOD APPLE MATH BOOK

(Grades 1 to 6)

- Grim and Mitchell

This book is designed in an informal way to show that anyone can "think up" and develop math activities. The book contains many work pages for the students to use. These are shown with an apple in the corner. There are four game boards ready for you and your students to use.

The ideas here are designed to: (1) make math fun; (2) allow students the opportunity to use basic skills learned in basic materials in practical ways; (3) motivate students and teachers into discovering and developing additional activities - to look for math everywhere; (4) show that math is found everywhere, not just in schools, classrooms, desks and textbooks; (5) involve students in the higher thought processes, not just in the memorization of facts, but in divergent and evaluation thinking.

Contents: Create a Learning Centre; Math and Last Year's Calendar; The Garden - A Simulation; Math Can Leave a Good Taste in Your Mouth; Odds 'n' Ends; Math Art; Have a Happy Pumpkin Day; Mother Nature Can Help You Teach Math; Go! Go! Go! Metrics; Reviewing Math the Good Apple Way; Mapping Your Way Mathematically; Easy Math Games. Cost is $11.95; over 200 pages.

1980 YEARBOOK

Problem Solving in School Mathematics

Edited by
Stephen Krulik

The theme of the 1980s!

Problem solving is *the* reason for teaching mathematics. This basic skill—one that students must use throughout their lives—is a skill that *can* be taught and *must* be taught. The 22 essays were all written with an eye to the classroom teacher. Here are ideas, problems, examples, and illustrations for use in the classroom at all levels of instruction. Here are the well-known heuristics of Polya, a paper by Polya, papers about Polya. Here are papers about research and evaluation.

The titles shown will illustrate the many facets of problem solving that can be used in *your* classroom. Clothbound, 256 pp.
