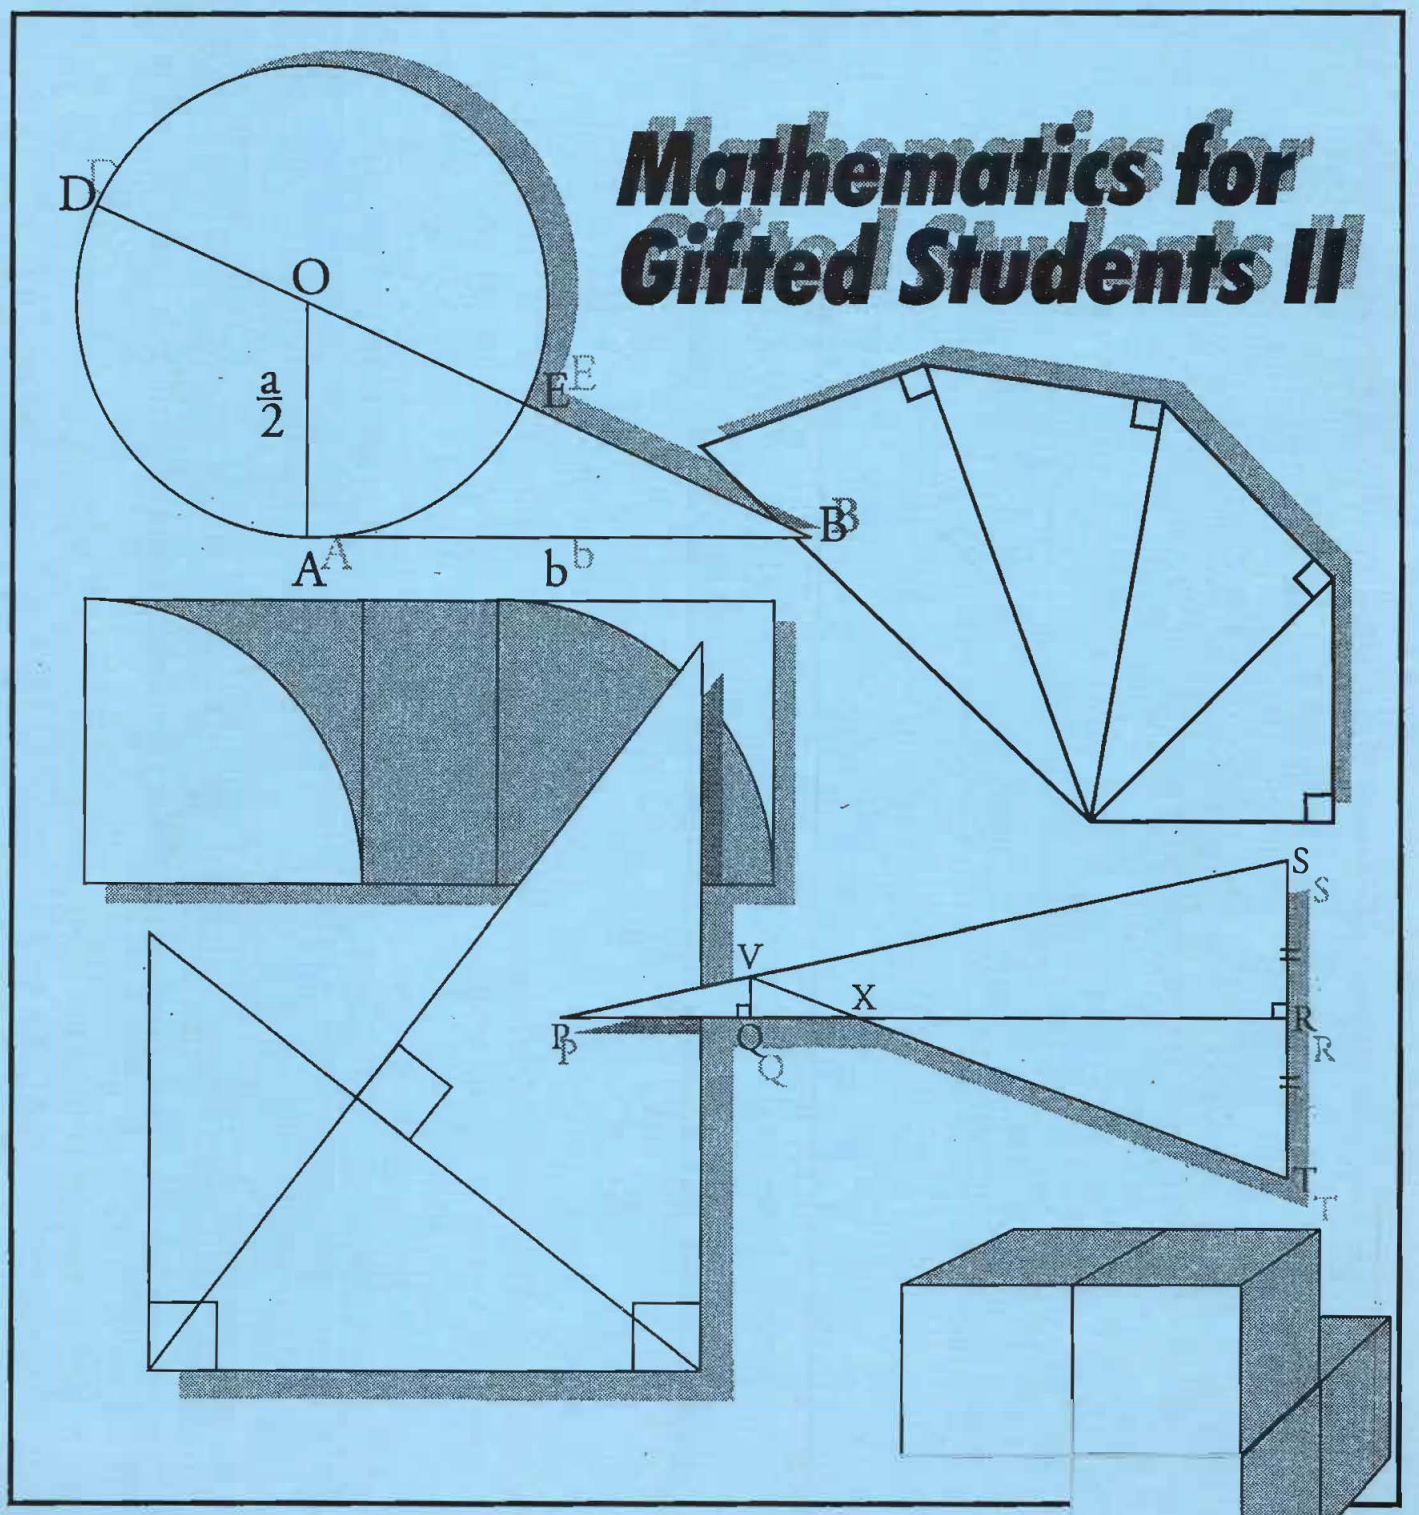
Delta-k

Special Edition

Mathematics for Gifted Students II



Volume 33
Number 3
December 1996

A joint publication of
Mathematics Council and
Gifted and Talented Education Council
of The Alberta Teachers' Association

delta-K is the official journal of the Mathematics Council (MCATA) of The Alberta Teachers' Association (ATA).

The journal seeks to stimulate thinking, to explore new ideas and to offer various viewpoints. It serves to promote MCATA's convictions about mathematics education.

JOURNAL OF THE MATHEMATICS COUNCIL OF THE ALBERTA TEACHERS' ASSOCIATION

Volume 33, Number 3 December 1996

Contents

Guest Editor's Comments	iii	*Andy Liu*
History - A Great Source of Challenging Problems	1	*Maria de Losada*
Primary School Mathematics Olympiad in China	7	*Pak-Hong Cheung* and *Zonghu Qiu*
Changing Tires	11	*Derek Holton*
Packing Boxes with N-tetracubes	15	*Andris Cibulis*
The South African Mathematical Talent Search	19	*John Webb*
Appendix I. Student Projects	21	
An Imaginary Postal Service	23	*S. Laffin*
Dissecting Rectangular Strips into Dominoes	27	*F. Chen, K. Nearey* and *A. Tchernyi*
A Space Interlude	31	*G. Lee, K. Ng* and *P. Stein*
How to Flip without Flipping	33	*D. Robbins, S. Sivapalan* and *M. Wong*
A Tale of Two Cities	35	*C. Heuberger*
Appendix II. High School Mathematics Competitions in Alberta	39	
Appendix III. A Selected Bibliography on Popular Mathematics	77	
Appendix IV. A Selection of Resource Material	97	
Appendix V. Answers and Solutions	101

Copies of this publication are being distributed to members of the Mathematics Council and the Gifted and Talented Education Council. Additional copies are available to members and non-members at $7.00 per copy. Address requests to The Alberta Teachers' Association.

Acknowledgements

For assistance received in editing this joint issue, the editor expresses his gratitude to Byung-Kyu Chun of Harry Ainlay Composite High School, Graham Denham of the University of Michigan, Mrs. Pat McManus of Bishop Caroll High School, the staff of the Alberta Teachers' Association, especially Bernie Cordell, Brian Dyke, Karen Virag and Dorothy Stanley, and Professors John B. Percevault and Carolyn Yewchuk, the respective editors of delta-K *and* AGATE.

About the Contributors

Maria de Losada is a Full Professor at the National University of Colombia and the co-founder and Director of the Colombian Mathematical Olympiad. She obtained a graduate degree in mathematics education from Harvard, and engaged in graduate studies in mathematics at the University of Illinois at Chicago, with a Fellowship from the Ford Foundation. Her research interest is in mathematics education. The philosophy of mathematics is her main hobby, and she has authored a book on this topic which is forthcoming. She is a recent winner of the prestigious Hiblert's Award from the World Federation of National Mathematical Competitions, partly due to her effort in founding the Ibero-American Olympiad in 1985.

Pak-Hong Cheung graduated in 1979 with a BSc in Mathematics and Physics from the University of Hong Kong, where he later also received a Certificate and an Advanced Diploma in Education. In 1991 he was awarded the degree of MSocSc in Applied Statistics, also by the University of Hong Kong. He taught in secondary schools for eleven years. In 1990 he was appointed a lecturer in Mathematics Education in the Department of Curriculum Studies of the University of Hong Kong. His interests include problem-solving, use of Macintosh in mathematics education and publishing in the World Wide Web.

Zonghu Qiu is a professor in the Institute of System Sciences, Academia Sinica in Beijing. Before 1980, he worked on operations research and mathematical programming in the Institute of Mathematics. His involvement with mathematics competitions in China dates back to 1978. Since 1980, he has been responsible for organizing and setting problems for mathematics competitions hosted by the Chinese Mathematical Society, which include annual national leagues for middle and high schools, the Chinese Primary School Mathematical Olympiad and the Chinese Mathematical Olympiad. He is also interested in recreational mathematics and has written articles and books in this area.

Derek Holton combines research in graph theory and mathematics education with a host of activities including running school math camps, founding a national mathematics competition, leading the New Zealand team at various IMOs, and being a consultant for a TV game show. His book *Let's Solve Some Math Problems* is published by the Canadian Mathematics Competition. A new book written by Derek in collaboration by Peter Hilton, and Jean Pedersen is called *Mathematical Reflections* and is to be published by Springer-Verlag toward the end of this year.

Andris Cibulis was born in 1955 in Latvia. He graduated from the University of Latvia in 1978, and received a Ph.D. in 1984 from the Institute of Applied Mathematics and Mechanics in Donetsk, Ukraine. He is an associate professor at the University of Latvia and a leading researcher of the Institute of Mathematics and Computer Science. His interests cover mathematical analysis, differential equations with discontinuous nonlinearities, recreational mathematics, teaching and mathematical toys, some of which he has invented.

John Webb is a Professor of Mathematics at the University of Cape Town, South Africa. He obtained his Ph.D. from the University of Cambridge in 1966. He edits Mathematical Digest, a quarterly magazine for high school students, is the Director of the University of Cape Town Mathematics Competition and the Chairman of the South African Committee for the International Mathematical Olympiad.

Andy Liu (guest editor) is a full professor at the University of Alberta. In recent years, he has won three awards for excellence in teaching. He served on the Problem Selection Committee for the International Mathematical Olympiad in Hong Kong, 1994, and chaired the same committee in Waterloo, 1995. He is a vice-president of the International Mathematics Tournament of the Towns.
