

Accent on Applications

Applications in School Mathematics

Edited by
Sidney Sharron

Written for you, K-14 mathematics classroom teachers, to directly involve you with the "what," "why," and "how" of applications. Contains 20 different (sometimes contrasting) essays written in an informal and conversational style. Presents numerous absorbing mathematical models, student worksheets, illustrations, and ideas that you can use with various grade levels.

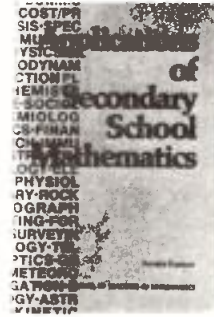

The applications discussed cover a broad range of topics — from everyday real-life situations to the scientific and the unusual.

The chapter titles will convince you that this is a book that needs to be added to your school library or to your own collection of valuable references. Clothbound, 256 pp.

\$12.00 (*9.60 to individual members)

APPLICATIONS OF SECONDARY SCHOOL MATHEMATICS

by Bernice Kastner

Help for the teacher who would like to answer the recurring question "What's it good for?" with responses that the student will understand and find interesting and important.

The book is based on the idea that mathematics teachers will find it advantageous to be able to point to useful, interesting, and diverse applications of the mathematics they teach. It presents **real** applications from such fields as physics, chemistry, biology, economics, and music, with which mathematics teachers sometimes have little experience. 1978. 106 pp. \$7.00 (\$5.60 to NCTM individual members)
